Cat Yowling and Meowing
author article title

Mieshelle's most recent study of animal behavior was at Harvard University.

Cat driving you crazy? Cat yowling and excessive meowing can do that. We've handled many cases where the cat owner had not had a good night's sleep in 8 years and others that were about to be evicted because of their cats' non-stop or early morning meowing. We can show you just what to do — and what not to do. Typically our clients declare success in 2 weeks with this behavior issue.

Some cat owners are simply dumbfounded that their cat can consistently beat a 6:30a.m. alarm clock by meowing at 6:28a.m. Did you know that thousands of cat owners are dealing with meowing between 3 and 6 a.m. in the morning just like you? There are several reasons that can cause this behavior, but all can be remedied.

The excessive-meowing consult has become my favorite over the years because I can so profoundly change the lives of the cat owner and the cat. Finally able to get some rest, they say I've added ten years to their lives, helped them to keep their apartments (and their jobs, now that they're no longer so sleep deprived that they can't function), and even saved their marriages.

Document Type: Article *pub. name Pub date Pg. #s*

Subject Terms: CATS -- Physiology
DOMESTIC animals -- Genetics
AFRICAN wildcat
MITOCHONDRIAL DNA
MICROSATELLITES (Genetics)

Abstract: This article discusses research into the evolution of domesticated **cats**, which is complicated by the fact that they do not appear to serve humans. Although several species are morphologically similar, genetic research focusing on mitochondrial DNA and genetic microsatellites found that domesticated **cats** descended from *F. sylvestrus lybica*. Archaeological research indicating **cats** came to live with humans as the prevalence of house mice in agricultural settlements increased is noted.
